Art Unit: 3641

1. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for examination purposes, even though this requirement is traversed. The single species shall be a single example of "R" from the formula in claim 21 being particularly specified. Different classification and search obtains in many of the classes within the class 260 organic chemistry hierarchy, depending on R, and thus this requirement is based upon PTO policy regarding undue breadth, and or Markush terminology, MPEP 809.02(d) and 803.02.

All claims are generic except species claims 9-10, 25-26 29 and 30. As to the species claims, one proper (and claimed) species is where "R" is the residue from polyethylene glycol. The other claimed species is where "R" is the residue from polycaprolactone. Applicant will recognize that polycaprolactone is a polyester of one kind - from a cyclic lactone precursor, while polyethylene glycol (and thus the claimed prepolymer as a whole) is a polyether. These two species are classified in different classes. The generic terminology used for "R" in claim 21, would also include any chain or moiety that has a chain solely of carbon, yielding one kind of polyether, while alternately the recitation of "carbon/heteroatom" chain includes any organic chain with any other element that can form a chain. This includes amines, amides, imides, phosphorous-containing and other possibilities too numerous to name. These are all separately classified. Thus, this requirement is proper on the basis of undue breadth and on the basis of Markush terminology.

2. Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

3. Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious

variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

4. Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

5. Claims 3-12 are objected to for an improper marked up version thereof. In the marked up version, the claim dependency in each case shows "[2]1". This is incorrect. Consider the proper "21 [1]." As the correction is simple and the clean copy is readily understandable since only claim dependency is corrected, the Examiner overlooks the deficiency and will not require correction.

Applicant is cautioned about future amendments. 37 CFR 1.121(c).
